

IBM Lotus Foundations Start

IBM Lotus Foundations Start offers companies with little or no in-house technical expertise the essential software required to run a business. It can be launched within 30 minutes and leverages self-managing and self-healing capabilities that minimize the need for human intervention.

IBM Lotus foundations start enables customers to do email, create and share documents, centrally manage files, store and secure business data, control access to information, connect offices and employees and protect their network and systems from unwanted disruptions and intrusions. Additionally, it serves as platform for customers to run native Linux and Lotus Domino applications and Microsoft Windows applications within a VMware container.

Customer Pain Points

- Lack the technical expertise to favorably leverage technology.
- Unauthorized network intrusions, viruses and spam threaten security of business information and disrupt productivity.
- Downtime and/or loss of data impede business continuity and profitability.
- Complexity and cost of business collaboration and productivity solutions.
- Time and expense of dealing with multiple technology vendors and products.
- Valuable time is lost when employees are out of the office.

Solution Business Benefits

- Minimizes IT hassle by automating many IT tasks: no in-house IT skill needed.
- Quickly sets up a security-rich company network – includes firewall, antivirus, and antispyware.
- Protects and stores data with frequent automated backups. Complete system restore can be done in minutes.
- Software appliance solution – one vendor, one solution.
- Connects remote employees with anytime/anywhere access.
- Bundled IBM Lotus Notes/Domino have been customized for the smaller business. Lotus office productivity tools included.
