

e-BO Enterprises and Logix Belux sign a strategic alliance.

Logix Belux, added-value distributor of IT solutions, becomes distributor of e-BO Enterprise's OCTOPUS platform for the Belux market.

Brussels, May 1st 2007 – e-BO Enterprises and Logix Belux announce a strategic alliance to develop the market for Virtual Desktop Infrastructure solutions.

e-BO Enterprises is the provider of the OCTOPUS platform, a full-featured end-to-end platform from the local client hardware until the centralized computer resources necessary for provisioning all client environments. It facilitates Server Based Computing & Virtualization Platforms and guarantees the best security by usage of strong authentication & authorization policies. The OCTOPUS platform handles and secures all client access on the network level (LAN, WAN and Internet). It supports multiple display protocols, Active Directory integration, Single Sign On and Printing (usb/ip). It is the ideal infrastructure platform for VDI, branch offices, extranet, mobile work forces and securing remote locations.

With this cooperation, e-BO Enterprises and Logix Belux will develop the market potential together, organize training and education for the solution, provide POC sets to help business partners and customers qualify the solution in their environment. Logix Belux will also actively support the Business Partners to develop their VDI business by providing co-marketing and lead generation support.

Christophe Dhaene, CEO of e-BO Enterprises : "It is our strongest believe that we are only at the beginning of the VDI 'Boom'. The push for centralization and the claim for better security is increasing in business cases like homework, extranet, branch offices, mobile users, We have the perfect answer to these two "market demands". OCTOPUS is a complete end-to-end solution for consolidation of desktops with the flexibility to optimize your centralized client resources independent of hardware vendor, terminal services/citrix solution or virtualization platform. It is a best-of-breed solution by combining the benefits of centralization without losing local physical control."

Tom Vallons, Solutions Development Manager of Logix Belux comments : "Logix Belux is a VAD who is focusing a lot on the development and positioning of solutions together with our business partners towards the market. Virtualization, infrastructure, storage, business continuity, disaster recovery and secure remote access are some of the areas we are driving. We believe very strongly in the Octopus platform, as it is providing a unique, secured, end-to-end solution for virtual desktop infrastructure, and it fits perfectly in our solution approach."

The OCTOPUS platform will be demonstrated as well at the VMware Customer Symposium on June 12th in Antwerpen. This is an excellent opportunity for VMware partners and endusers to learn more about the solution.

ABOUT e-BO ENTERPRISES
